

# Package: slickR (via r-universe)

August 27, 2024

**Title** Create Interactive Carousels with the 'JavaScript' 'Slick' Library

**Version** 0.6.1

**Date** 2023-08-02

**Description** Create and customize interactive carousels using the 'Slick' 'JavaScript' library and the 'htmlwidgets' package. The carousels can contain plots produced in R, images, 'iframes', videos and other 'htmlwidgets'. These carousels can be created directly from the R console, and viewed in the 'RStudio' internal viewer, in 'Shiny' apps and R Markdown documents.

**License** MIT + file LICENSE

**URL** <https://github.com/yonicd/slickR>

**BugReports** <https://github.com/yonicd/slickR/issues>

**Depends** R (>= 3.6.0)

**Imports** htmltools,utils,tools,lifecycle,stats,xml2,base64enc,htmlwidgets,checkmate

**Suggests** jsonlite, knitr, pdftools, rmarkdown, svglite, leaflet,  
testthat, covr

**VignetteBuilder** knitr

**RdMacros** lifecycle

**Encoding** UTF-8

**LazyData** true

**Roxygen** list(markdown = TRUE)

**RoxygenNote** 7.2.3

**Repository** <https://yonicd.r-universe.dev>

**RemoteUrl** <https://github.com/yonicd/slickr>

**RemoteRef** HEAD

**RemoteSha** 1a469961b203f9260a49b24e3ec78aef3ef54798

*nba\_player\_logo*      *NBA player logo*

### Description

NBA player logo URI

### Usage

`nba_player_logo`

### Format

A data frame with 150 rows and 4 variables:

`team` character, Team name  
`position` factor, Position of the Player  
`name` character, Player Name  
`uri` character, Player Headshot URI  
`player_home` character, Player Homepage URI

### Details

Logos harvested from <http://www.espn.com/nba/depth>

### See Also

Other data: [`nba\_team\_logo`](#)

---

nba_team_logo	<i>NBA team logo</i>
---------------	----------------------

---

### Description

NBA team logo URI

### Usage

```
nba_team_logo
```

### Format

A data frame with 30 rows and 2 variables:

team character, Team Name  
uri character, Team logo URI

### Details

Logos harvested from [https://i.cdn.turner.com/nba/nba/element/img/4.0/global/logos/512x512/bg.white/svg/team\\_short\\_name](https://i.cdn.turner.com/nba/nba/element/img/4.0/global/logos/512x512/bg.white/svg/team_short_name)  
replace team\_short\_name with three letter name of th team. e.g. BOS for Boston

### See Also

Other data: [nba\\_player\\_logo](#)

---

settings	<i>Modify components of slick settings</i>
----------	--

---

### Description

Customize non-data components of the carousel.

### Usage

```
settings(  
  accessibility,  
  adaptiveHeight,  
  autoplay,  
  autoplaySpeed,  
  arrows,  
  asNavFor,  
  appendArrows,  
  appendDots,  
  prevArrow,
```

```

nextArrow,
centerMode,
centerPadding,
cssEase,
customPaging,
dots,
dotsClass,
draggable,
fade,
focusOnSelect,
easing,
edgeFriction,
infinite,
initialSlide,
lazyLoad,
mobileFirst,
pauseOnFocus,
pauseOnHover,
pauseOnDotsHover,
respondTo,
responsive,
rows,
slide,
slidesPerRow,
slidesToShow,
slidesToScroll,
speed,
swipe,
swipeToSlide,
touchMove,
touchThreshold,
useCSS,
useTransform,
variableWidth,
vertical,
verticalSwiping,
rtl,
waitForAnimate,
zIndex,
...
)

```

## Arguments

accessibility	logical, Enables tabbing and arrow key navigation, Default: TRUE
adaptiveHeight	logical, Enables adaptive height for single slide horizontal carousels., Default: FALSE
autoplay	logical, Enables Autoplay, Default: FALSE

autoplaySpeed	numeric, Autoplay Speed in milliseconds, Default: 3000
arrows	logical, Prev/Next Arrows, Default: TRUE
asNavFor	character, Set the slider to be the navigation of other slider (Class or ID Name), Default: null
appendArrows	character, Change where the navigation arrows are attached (Selector, htmlString, Array, Element, jQuery object), Default: \$(element)
appendDots	character, Change where the navigation dots are attached (Selector, htmlString, Array, Element, jQuery object), Default: \$(element)
prevArrow	character (html  jQuery selector)   object (DOM node  jQuery object), Allows you to select a node or customize the HTML for the "Previous" arrow., Default: <button type="button" class="slick-prev">Previous</button>
nextArrow	character (html  jQuery selector)   object (DOM node  jQuery object), Allows you to select a node or customize the HTML for the "Next" arrow., Default: <button type="button" class="slick-next">Next</button>
centerMode	logical, Enables centered view with partial prev/next slides. Use with odd numbered slidesToShow counts., Default: FALSE
centerPadding	character, Side padding when in center mode (px or \ Default: '50px'
cssEase	character, CSS3 Animation Easing, Default: 'ease'
customPaging	function, Custom paging templates. See source for use example., Default: n/a
dots	logical, Show dot indicators, Default: FALSE
dotsClass	character, Class for slide indicator dots container, Default: 'slick-dots'
draggable	logical, Enable mouse dragging, Default: TRUE
fade	logical, Enable fade, Default: FALSE
focusOnSelect	logical, Enable focus on selected element (click), Default: FALSE
easing	character, Add easing for jQuery animate. Use with easing libraries or default easing methods, Default: 'linear'
edgeFriction	numeric, Resistance when swiping edges of non-infinite carousels, Default: 0.15
infinite	logical, Infinite loop sliding, Default: TRUE
initialSlide	numeric, Slide to start on, Default: 0
lazyLoad	character, Set lazy loading technique. Accepts 'ondemand' or 'progressive', Default: 'ondemand'
mobileFirst	logical, Responsive settings use mobile first calculation, Default: FALSE
pauseOnFocus	logical, Pause Autoplay On Focus, Default: TRUE
pauseOnHover	logical, Pause Autoplay On Hover, Default: TRUE
pauseOnDotsHover	logical, Pause Autoplay when a dot is hovered, Default: FALSE
respondTo	character, Width that responsive object responds to. Can be 'window', 'slider' or 'min' (the smaller of the two), Default: 'window'
responsive	object, Object containing breakpoints and settings objects (see demo). Enables settings sets at given screen width. Set settings to "unslick" instead of an object to disable slick at a given breakpoint., Default: none

<code>rows</code>	numeric, Setting this to more than 1 initializes grid mode. Use <code>slidesPerRow</code> to set how many slides should be in each row., Default: 1
<code>slide</code>	element, Element query to use as slide, Default: ""
<code>slidesPerRow</code>	numeric, With grid mode initialized via the <code>rows</code> option, this sets how many slides are in each grid row. dver, Default: 1
<code>slidesToShow</code>	numeric, # of slides to show, Default: 1
<code>slidesToScroll</code>	numeric, # of slides to scroll, Default: 1
<code>speed</code>	numeric, Slide/Fade animation speed in milliseconds, Default: 300
<code>swipe</code>	logical, Enable swiping, Default: TRUE
<code>swipeToSlide</code>	logical, Allow users to drag or swipe directly to a slide irrespective of <code>slidesToScroll</code> , Default: FALSE
<code>touchMove</code>	logical, Enable slide motion with touch, Default: TRUE
<code>touchThreshold</code>	numeric, To advance slides, the user must swipe a length of (1/ <code>touchThreshold</code> ) * the width of the slider, Default: 5
<code>useCSS</code>	logical, Enable/Disable CSS Transitions, Default: TRUE
<code>useTransform</code>	logical, Enable/Disable CSS Transforms, Default: TRUE
<code>variableWidth</code>	logical, Variable width slides, Default: FALSE
<code>vertical</code>	logical, Vertical slide mode, Default: FALSE
<code>verticalSwiping</code>	logical, Vertical swipe mode, Default: FALSE
<code>rtl</code>	logical, Change the slider's direction to become right-to-left, Default: FALSE
<code>waitForAnimate</code>	logical, Ignores requests to advance the slide while animating, Default: TRUE
<code>zIndex</code>	numeric, Set the <code>zIndex</code> values for slides, useful for IE9 and lower, Default: 1000
<code>...</code>	unused

## Details

To find further information on the attributes that can be used please refer to <http://kenwheeler.github.io/slick/>.

## Value

list of class c('setting','slickR')

## Examples

```
if(interactive()){
  slick <- slickR(obj=nba_team_logo$uri)
  slick
  # Use settings function to manipulate the slick object
}
```

```
# Add dots  
  
slick + settings(dots = TRUE)  
  
# Autplay elements in the carousel  
  
slick + settings(autoplay = TRUE, autoplaySpeed = 1000)  
  
}
```

---

slickR

*slick.js image carousel htmlwidget*

---

## Description

use slick.js library in R

## Usage

```
slickR(  
  obj,  
  slideId = "baseDiv",  
  slideType = "img",  
  objLinks = NULL,  
  padding = 1,  
  width = "95%",  
  height = NULL,  
  elementId = NULL,  
  slickOpts = NULL,  
  synchSlides = NULL,  
  dotObj = NULL  
)
```

## Arguments

obj	character, vector of path or url to images
slideId	character, id of slide, Default: 'baseDiv'
slideType	character, type of object to put in slide, Default: 'img'
objLinks	character, links to attach to images in slide, Default: NULL
padding	numeric, percent of width between each image in the carousel for each slider, Default: 1
width	character, width of htmlwidget, Default: '95%'
height	character, height of htmlwidget, Default: NULL
elementId	character, id tag of htmlwidget, Default: NULL

<code>slickOpts</code>	<b>[Deprecated]</b>
<code>synchSlides</code>	<b>[Deprecated]</b>
<code>dotObj</code>	<b>[Deprecated]</b>

## Details

`slick.js` is an image carousel javascript library.

To find all the attributes that can be used please refer to the link.

It is possible to stack slides through the `%stack%` operator.

It is possible to synchronize slides through the `%synch%` operator.

To replace the dots with icons use the settings to define the `customPaging` attribute with the appropriate JS(.) function call.

The `slideType` accepts the type of html DOM you want to be in the slide, eg `img`, `iframe`.

The combination of `slideType = 'img-lazy'` and `settings(lazyLoad = 'ondemand')` will inform the `htmlwidget` that the images are to be loaded lazily. For more information see the `slickjs` [documentation](#).

## See Also

Other invoke: [slickR-shiny](#)

## Examples

```
if(interactive()){

  slick <- slickR(obj=nba_team_logo$uri)

  slick

  # add dots to the first slick and autoplay at 1 second a slide

  slick + settings(dots = TRUE, autoplay = TRUE, autoplaySpeed = 1000)

  # working with multiple slicks

  sets <- split(
    sample(nba_team_logo$uri, size = 28, replace = FALSE),
    rep(c(1,2,3,4),each=7)
  )

  slicks <- lapply(sets,FUN = function(x,...){
    slickR(obj = x,...)
  },height = 100)

  # independent slicks

  Reduce(`%stack%`,slicks)
```

```
# 1,2 synch stacked on 3,4 synch  
  
(slicks[[1]] %synch% slicks[[2]]) %stack% (slicks[[3]]%synch%slicks[[4]])  
}
```

---

**slickR-shiny***Shiny bindings for slickR*

---

**Description**

Output and render functions for using slickR within Shiny applications and interactive Rmd documents.

**Usage**

```
slickROutput(outputId, width = "100%", height = "400px")  
  
renderSlickR(expr, env = parent.frame(), quoted = FALSE)
```

**Arguments**

outputId	output variable to read from
width, height	Must be a valid CSS unit (like '100%', '400px', 'auto') or a number, which will be coerced to a string and have 'px' appended.
expr	An expression that generates a slickR
env	The environment in which to evaluate expr.
quoted	Is expr a quoted expression (with quote())? This is useful if you want to save an expression in a variable.

**See Also**

Other invoke: [slickR\(\)](#)

**slick\_div***Create a DOM element for slickR***Description**

Wraps an R object in slickR compatible DOM

**Usage**

```
slick_div(
  x,
  css = htmltools::css(marginLeft = "auto", marginRight = "auto"),
  type = "img",
  links = NULL
)
```

**Arguments**

<code>x</code>	object
<code>css</code>	<code>css</code> object, Default: <code>htmltools::css(marginLeft='auto',marginRight='auto')</code>
<code>type</code>	character, type of DOM, Default: 'img'
<code>links</code>	character, links to use on the input object, Default: NULL

**Details**

Method converts `xml_document`, `htmlwidget`, character, or list of objects to a compatible DOM

**Value**

list of shiny tag objects

**See Also**

Other html: [slick\\_list\(\)](#)

**Examples**

```
# image
slick_div(nba_team_logo$uri[1])

# vector of images
slick_div(nba_team_logo$uri[c(1:5)])

# text
slick_div('abc',type = 'p')
```

---

slick_list	<i>List of DOM elements</i>
------------	-----------------------------

---

## Description

Convert a list of [tags](#) into a list that slickR can render

## Usage

```
slick_list(...)
```

## Arguments

...	Elements to convert
-----	---------------------

## Value

[tagList](#)

## See Also

[tagList](#), [tags](#)

Other html: [slick\\_div\(\)](#)

## Examples

```
img1 <- htmltools::img(src = nba_player_logo$uri[1])
img2 <- htmltools::img(src = nba_player_logo$uri[2])

slick_list(img1, img2)
```

---

%synch%	<i>Slick pipe operators</i>
---------	-----------------------------

---

## Description

Pipe operators to combine plots by either stacking or synching multiple sliders.

## Usage

```
e1 %synch% e2
```

```
e1 %stack% e2
```

**Arguments**

e1	slickR htmlwidget to place on top
e2	slickR htmlwidget to place on bottom

**Value**

htmlwidget

**Examples**

```
if(interactive()){

  # working with multiple slicks

  sets <- split(
    sample(nba_team_logo$uri, size = 28, replace = FALSE),
    rep(c(1,2,3,4),each=7)
  )

  slicks <- lapply(sets,FUN = function(x,...){
    slickR(obj = x,...)
  },height = 100)

  # independent slicks

  Reduce(`%stack%`,slicks)

  # 1,2 synch stacked on 3,4 synch

  (slicks[[1]] %synch% slicks[[2]]) %stack% (slicks[[3]]%synch%slicks[[4]])

}
```
